

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method to identify a previously visited URL in results from a search, comprising:

entering at least one search term in a search engine;

loading a URL personal databook collection object in response to receiving the results of a network search by [a] the search engine; and

presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object; and

identifying any matches between results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.

2. (Original) The method of claim 1, further comprising comparing the results from the search to any URL object references in the URL personal databook collection object to identify any matches.

3. (Previously Amended) The method of claim 1, further comprising visually identifying any matches in the results from the search.

4. (Original) The method of claim 3, further comprising visually identifying any matches by at least one of a predetermined icon, a predetermined text font and highlighting.

5. (Currently Amended) The method of claim 3, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved or captured comments are presented on a page displaying the search results.
6. (Original) The method of claim 1, further comprising selecting any results from the search containing content of interest for future reference in response to no matches.
7. (Currently Amended) The method of claim 6, further comprising storing any selected only search results selected by a user in the URL personal databook collection object.
8. (Currently Amended) The method of claim 7, wherein storing any the selected search results comprises storing a URL reference.
9. (Original) The method of claim 8, further comprising storing the URL reference as a serialized object.
10. (Original) The method of claim 7, further comprising storing any comments in association with the stored search results.
11. (Currently Amended) A method to identify a previously visited URL in results from a search, comprising:
entering at least one search term in a search engine;
presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least

one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object;

comparing the results from a network search by [a] the search engine to any URL object references of previously visited URLs in [a] the URL personal databook collection object; and

visually identifying any matches between the results from the search and any URL object references in the URL personal databook collection object.

12. (Original) The method of claim 11, further comprising loading the URL personal databook collection object in response to presenting the results from the search.

13. (Currently Amended) The method of claim 11, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved or captured comments are presented on a page displaying the search results.

14. (Original) The method of claim 11, further comprising:

selecting any results from the search containing content of interest for future reference in response to no matches; and

storing any selected search results in the URL personal databook collection object.

15. (Original) The method of claim 14, further comprising:

presenting a dialogue box to enter comments related to any stored search results; and storing any comments in association with the stored search results.

16. (Currently Amended) A system to identify a previously visited URL in results from a search, comprising:

a processor;

a search engine to receive at least one search term;

an output device to present all search results that satisfy the at least one search term including any URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been selectively saved in the URL personal databook collection object;

a data structure operable on the processor to compare results from a network search by [a] the search engine to any URL references of previously visited URLs stored in a URL personal databook collection object; and

a data structure operable on the processor to identify any matches between the results from the search and any URL references stored in the URL personal databook collection object.

17. (Previously Amended) The system of claim 16, further comprising a data structure operable on the processor to visually identify any matches in the results from the search.

18. (Currently Amended) The system of claim 16, further comprising a data structure operable on the processor to present any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved or captured comments are presented on a page displaying the search results.

19. (Previously Amended) The system of claim 16, further comprising a data structure operable on the processor to select any results from the search containing content of interest for future reference in response to no matches.

20. (Previously Amended) The system of claim 19, further comprising a data structure operable on the processor to store any selected search results in the URL personal databook collection object.

21. (Previously Amended) The system of claim 20, further comprising a data structure operable on the processor to store and comments in association with the selected search results.

22. - 27. (Canceled)

28. (Currently Amended) A computer-readable medium having computer executable instructions for performing a method comprising:

entering at least one search term in a search engine;
presenting all search results that satisfy the at least one search term including any URL references that have been previously visited by a user and selectively saved in the URL personal databook collection object by the user and including any URL references that satisfy the at least one search term but have not been previously visited by the user and therefore have not been saved in the URL personal databook collection object;

comparing the results from a network search by [a] the search engine to any URL object references in [a] the URL personal databook collection object; and

visually identifying any matches between the results from the search and any URL object references of previously visited URLs in the URL personal databook collection object.

29. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 28, further comprising loading the URL personal databook collection object in response to presenting the results from the search.

30. (Currently Amended) The computer-readable medium having computer executable instructions for performing the method of claim 28, further comprising presenting any saved or captured comments associated with any matches in response to positioning a computer pointing device on a selected visually identified match in the results from the search, wherein the saved or captured comments are presented on a page displaying the search results.

31. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 28,

selecting any results from the search containing content of interest for future reference in response to no matches; and

storing any selected search results in the URL personal databook collection object.

32. (Original) The computer-readable medium having computer executable instructions for performing the method of claim 31,

presenting a dialogue box to enter comments related to any stored search results; and
storing any comments in association with the stored search results.

33. (Currently Amended) The method of claim 1, further comprising presenting any reason why a selected URL was previously visited in response to positioning a computer pointing device on a selected match in the results from the search, wherein the reason is presented on a page displaying the search results.
